Jewel of Muscat is a reconstruction of a 3rd century AH/9th century CE sewn-plank ship. She was built in the small fishing village of Qantab, in Muscat. More than 130 km of cordage, passed through 37,000 holes, were required to sew the planks and lash the frames. In 1431 AH/2010 CE, Captain Saleh bin Said al-Jabri and his crew successfully sailed her 6000 km to Singapore, during which she proved to be strong, fast, and weatherly.
